Hik-Connect

Pro

Hik-ProConnect

AXPRO Alarm system management through our convergent security service solution

Hik-Connect and Hik-ProConnect, mobile app and Web solutions for both end users, installers and integrators.

Providing control like never before, Hik-Connect with the AXPRO delivers unparalleled user access to security systems.

Hik-ProConnect give installers a brand new platform to control their estate of security systems, and commission sites faster and easier with our new app and web interface.

It also brings together the whole Hikvision product portfolio in one place, driving superior value for installers and integrators.
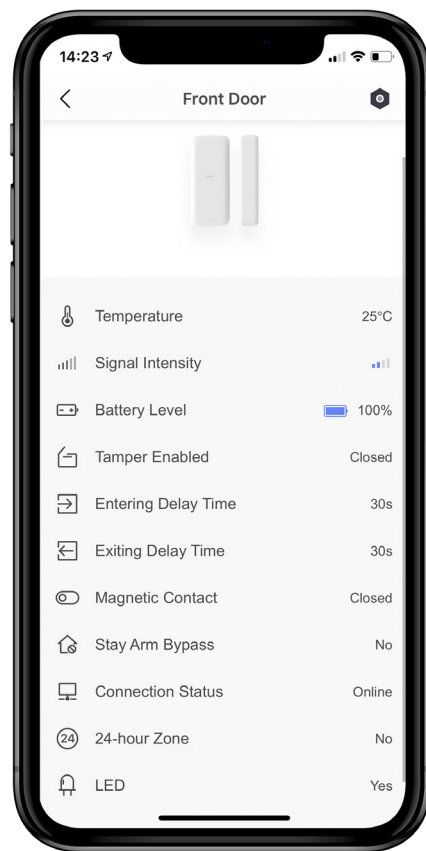

HIKVISION®

HIK-CONNECT

Unparalleled visibility, integration and control over security.

Through Hik-Connect, users are able to see their security like never before. Utilising the AXPRO intruder system alongside the whole range of Hikvision products, users can control systems, manage installer access, view video verification, and check configuration and settings of devices, from anywhere in the world.

Control from anywhere in the world

- One tap to arm/disarm
- Instant alarm notification

Sensor status and configuration

- Check device status including environmental temperature, settings and history of events.
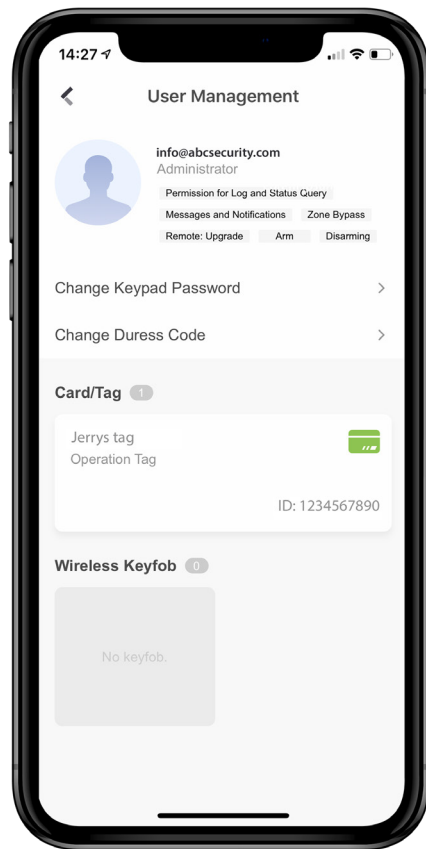

Integration with the whole
Hikvision portfolio

- On board video buffer
- Camera and detector linkage
- Superfast PIRCAM protocol for verification

Administrator account to add users and manage the system

- Administrators can control installer access authority anytime
- Add and manage other users of the system from anywhere

Hik-ProConnect

Energize your business through added efficiency and peace of mind.

Hik-ProConnect is a convergent, cloud-based security solution that helps manage services for your customers and expand your business by subscription offers.
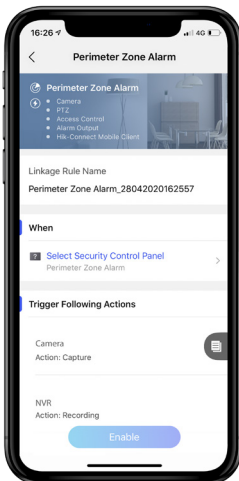

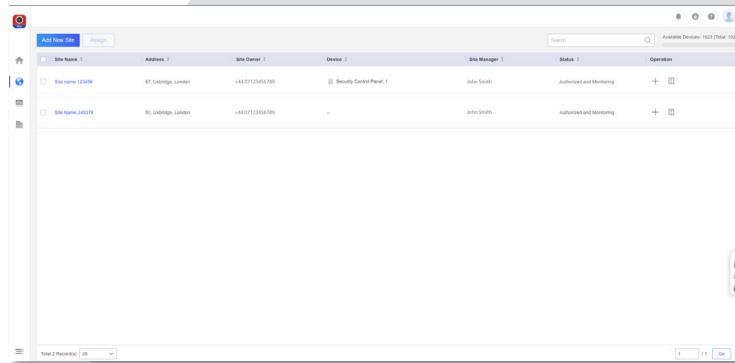

You can monitor the system health status of your customers' sites – even resolving problems – remotely, using a simple and reliable platform.

Hik-ProConnect solution enables you to customize security solutions for customers with fully-converged Hikvision devices, covering video, intrusion, access, intercom, and more.
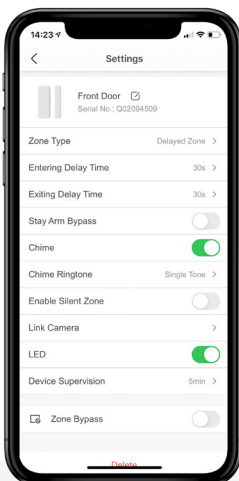

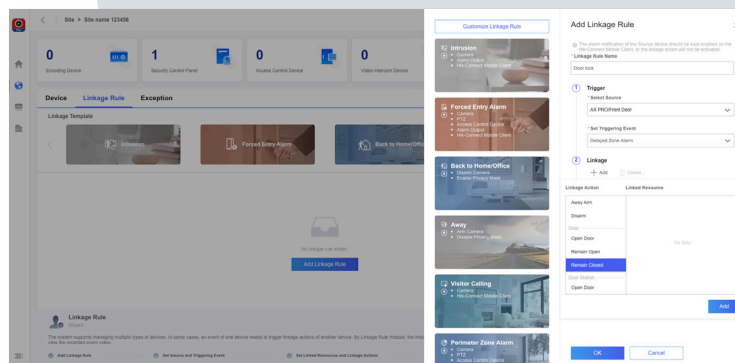

### Centralised multi-site & user management

- Invite a site owner
- Manage full estate of systems

### Integrated management across all Hikvision security products

Remote configuration of alarm panels from anywhere via App and Web interface

Add devices remotely

Control configuration permissions of users of the system anytime

HOSTED SERVICE

○ With secure Cloud P2P technology, Hikvision devices can be connected in most network environments through software via the cloud, with no need for static IP, DDNS service or port forwarding, reducing your costs.

○ Hosted service is highly flexible and scalable, so your upfront fees can be minimized and you can easily expand the system when you have more sites up and running.

○ Cloud-based software keeps your customers up-to-date with the latest features and system enhancements.

Co-Branding

Your company logo will be presented on the screen when your customer opens the Hik-Connect app, which helps promote awareness of your brand, creates added value and differentiation, and strengthens your products and services.
