

# HOW TO

## Set Alarm Notification of Hik-Connect App

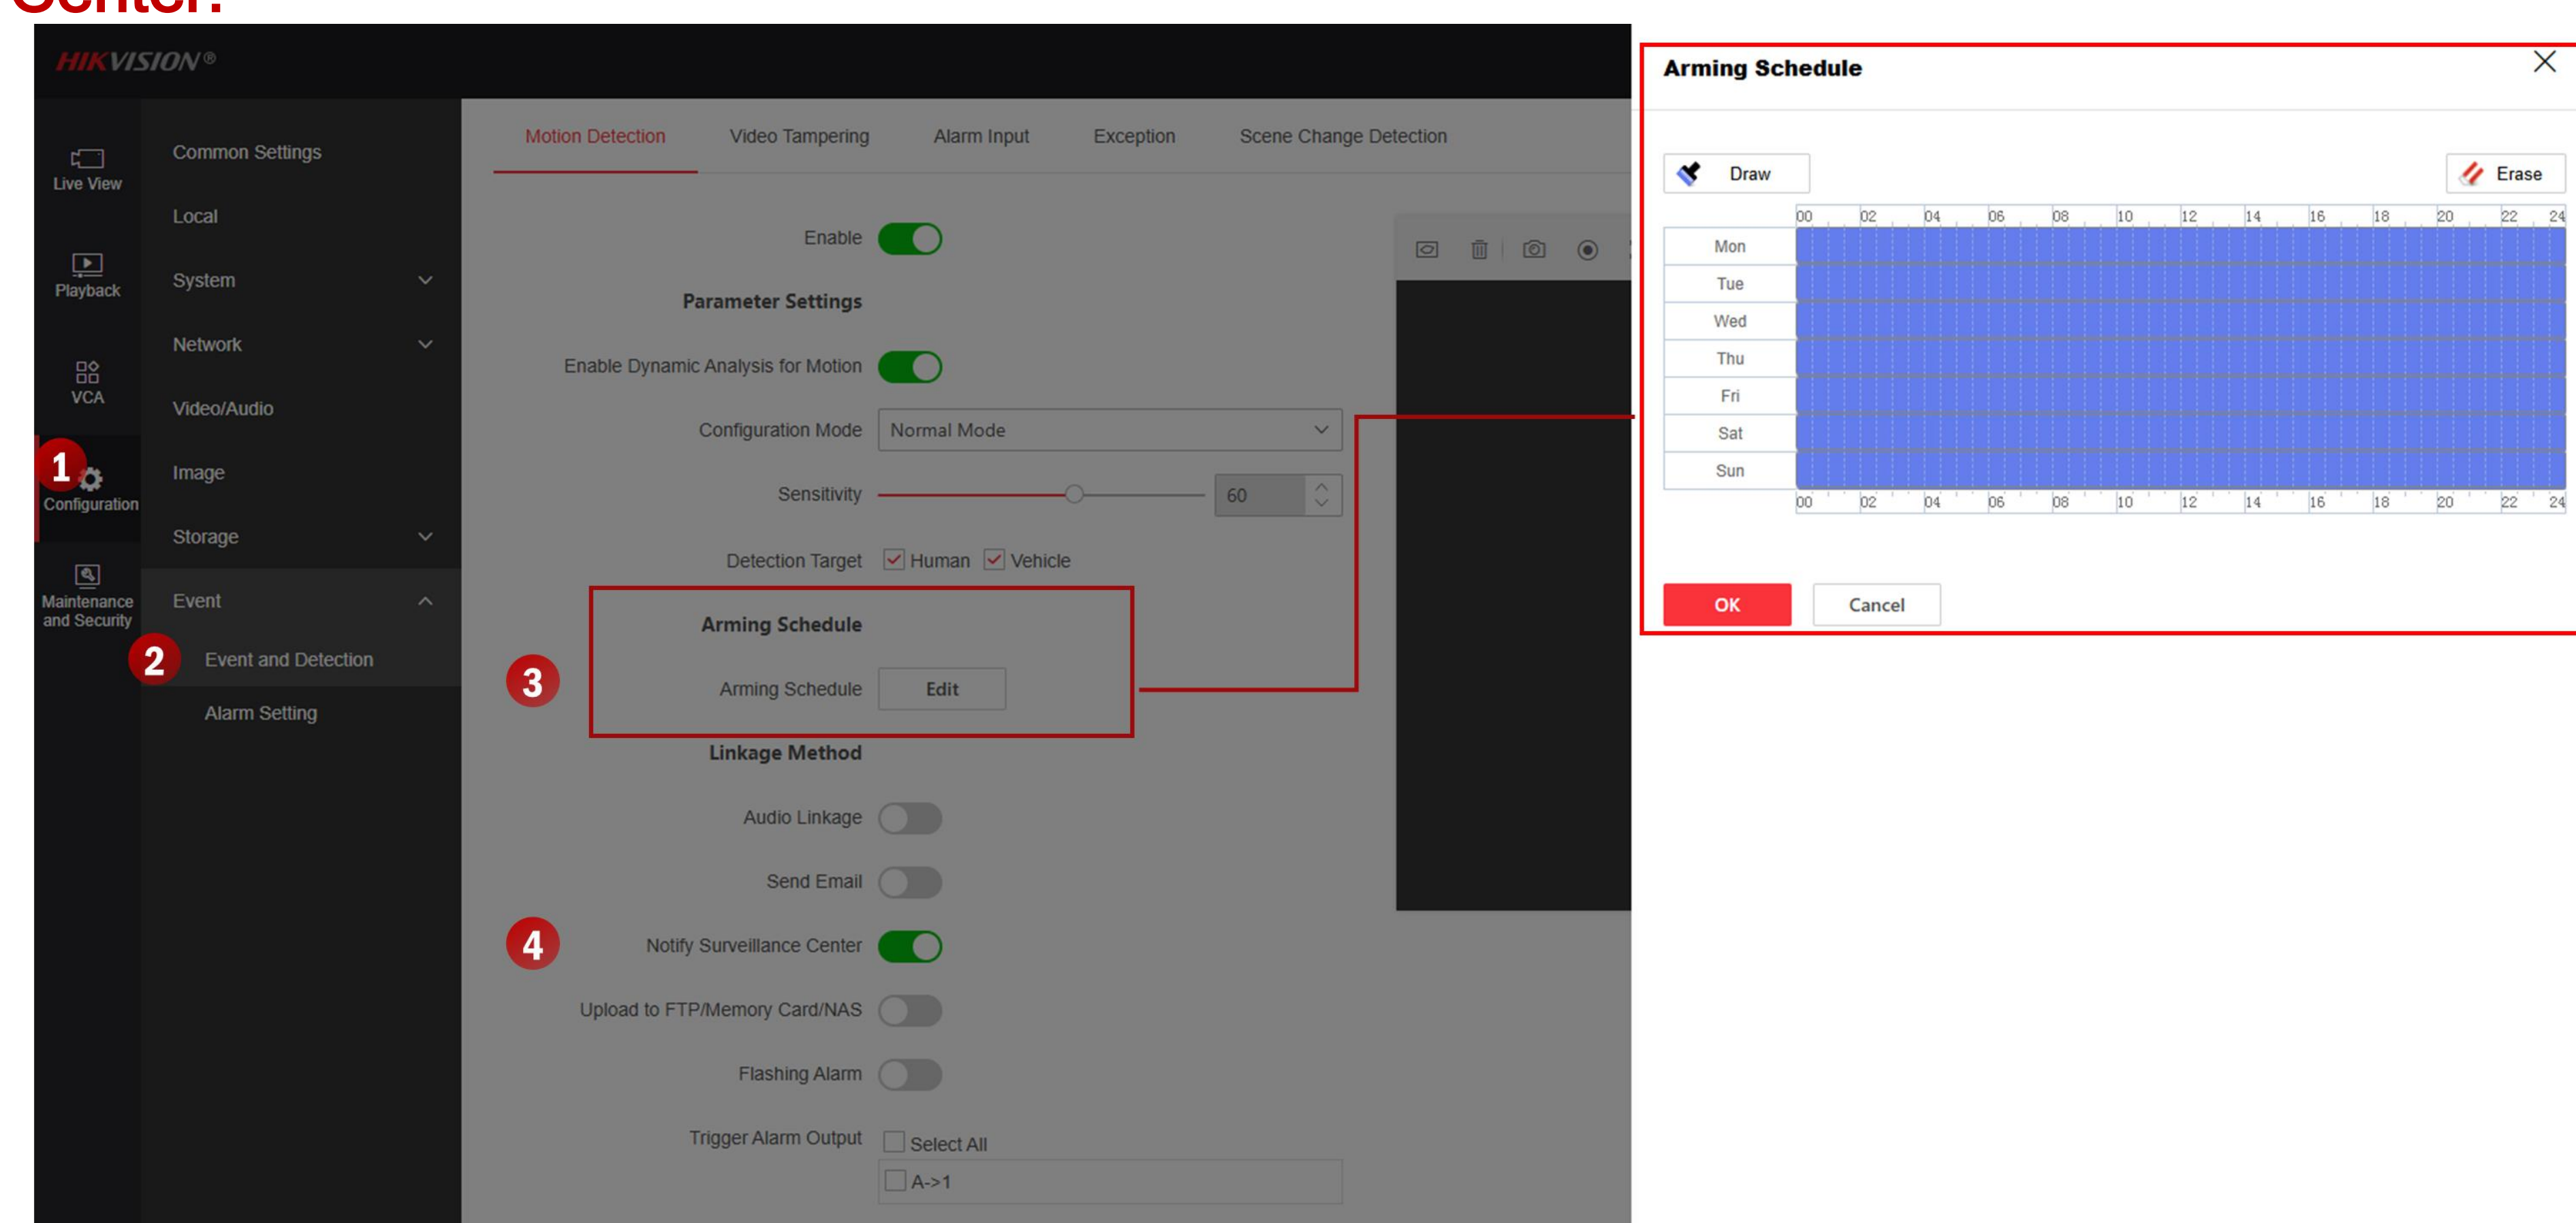

Hik-Connect supports alarm notification when there is event triggered, here we take motion detection as an example to show how to configure alarm notification.

### Setting on Device

Login the device on web , go to Configuration > Event > Event and Detection

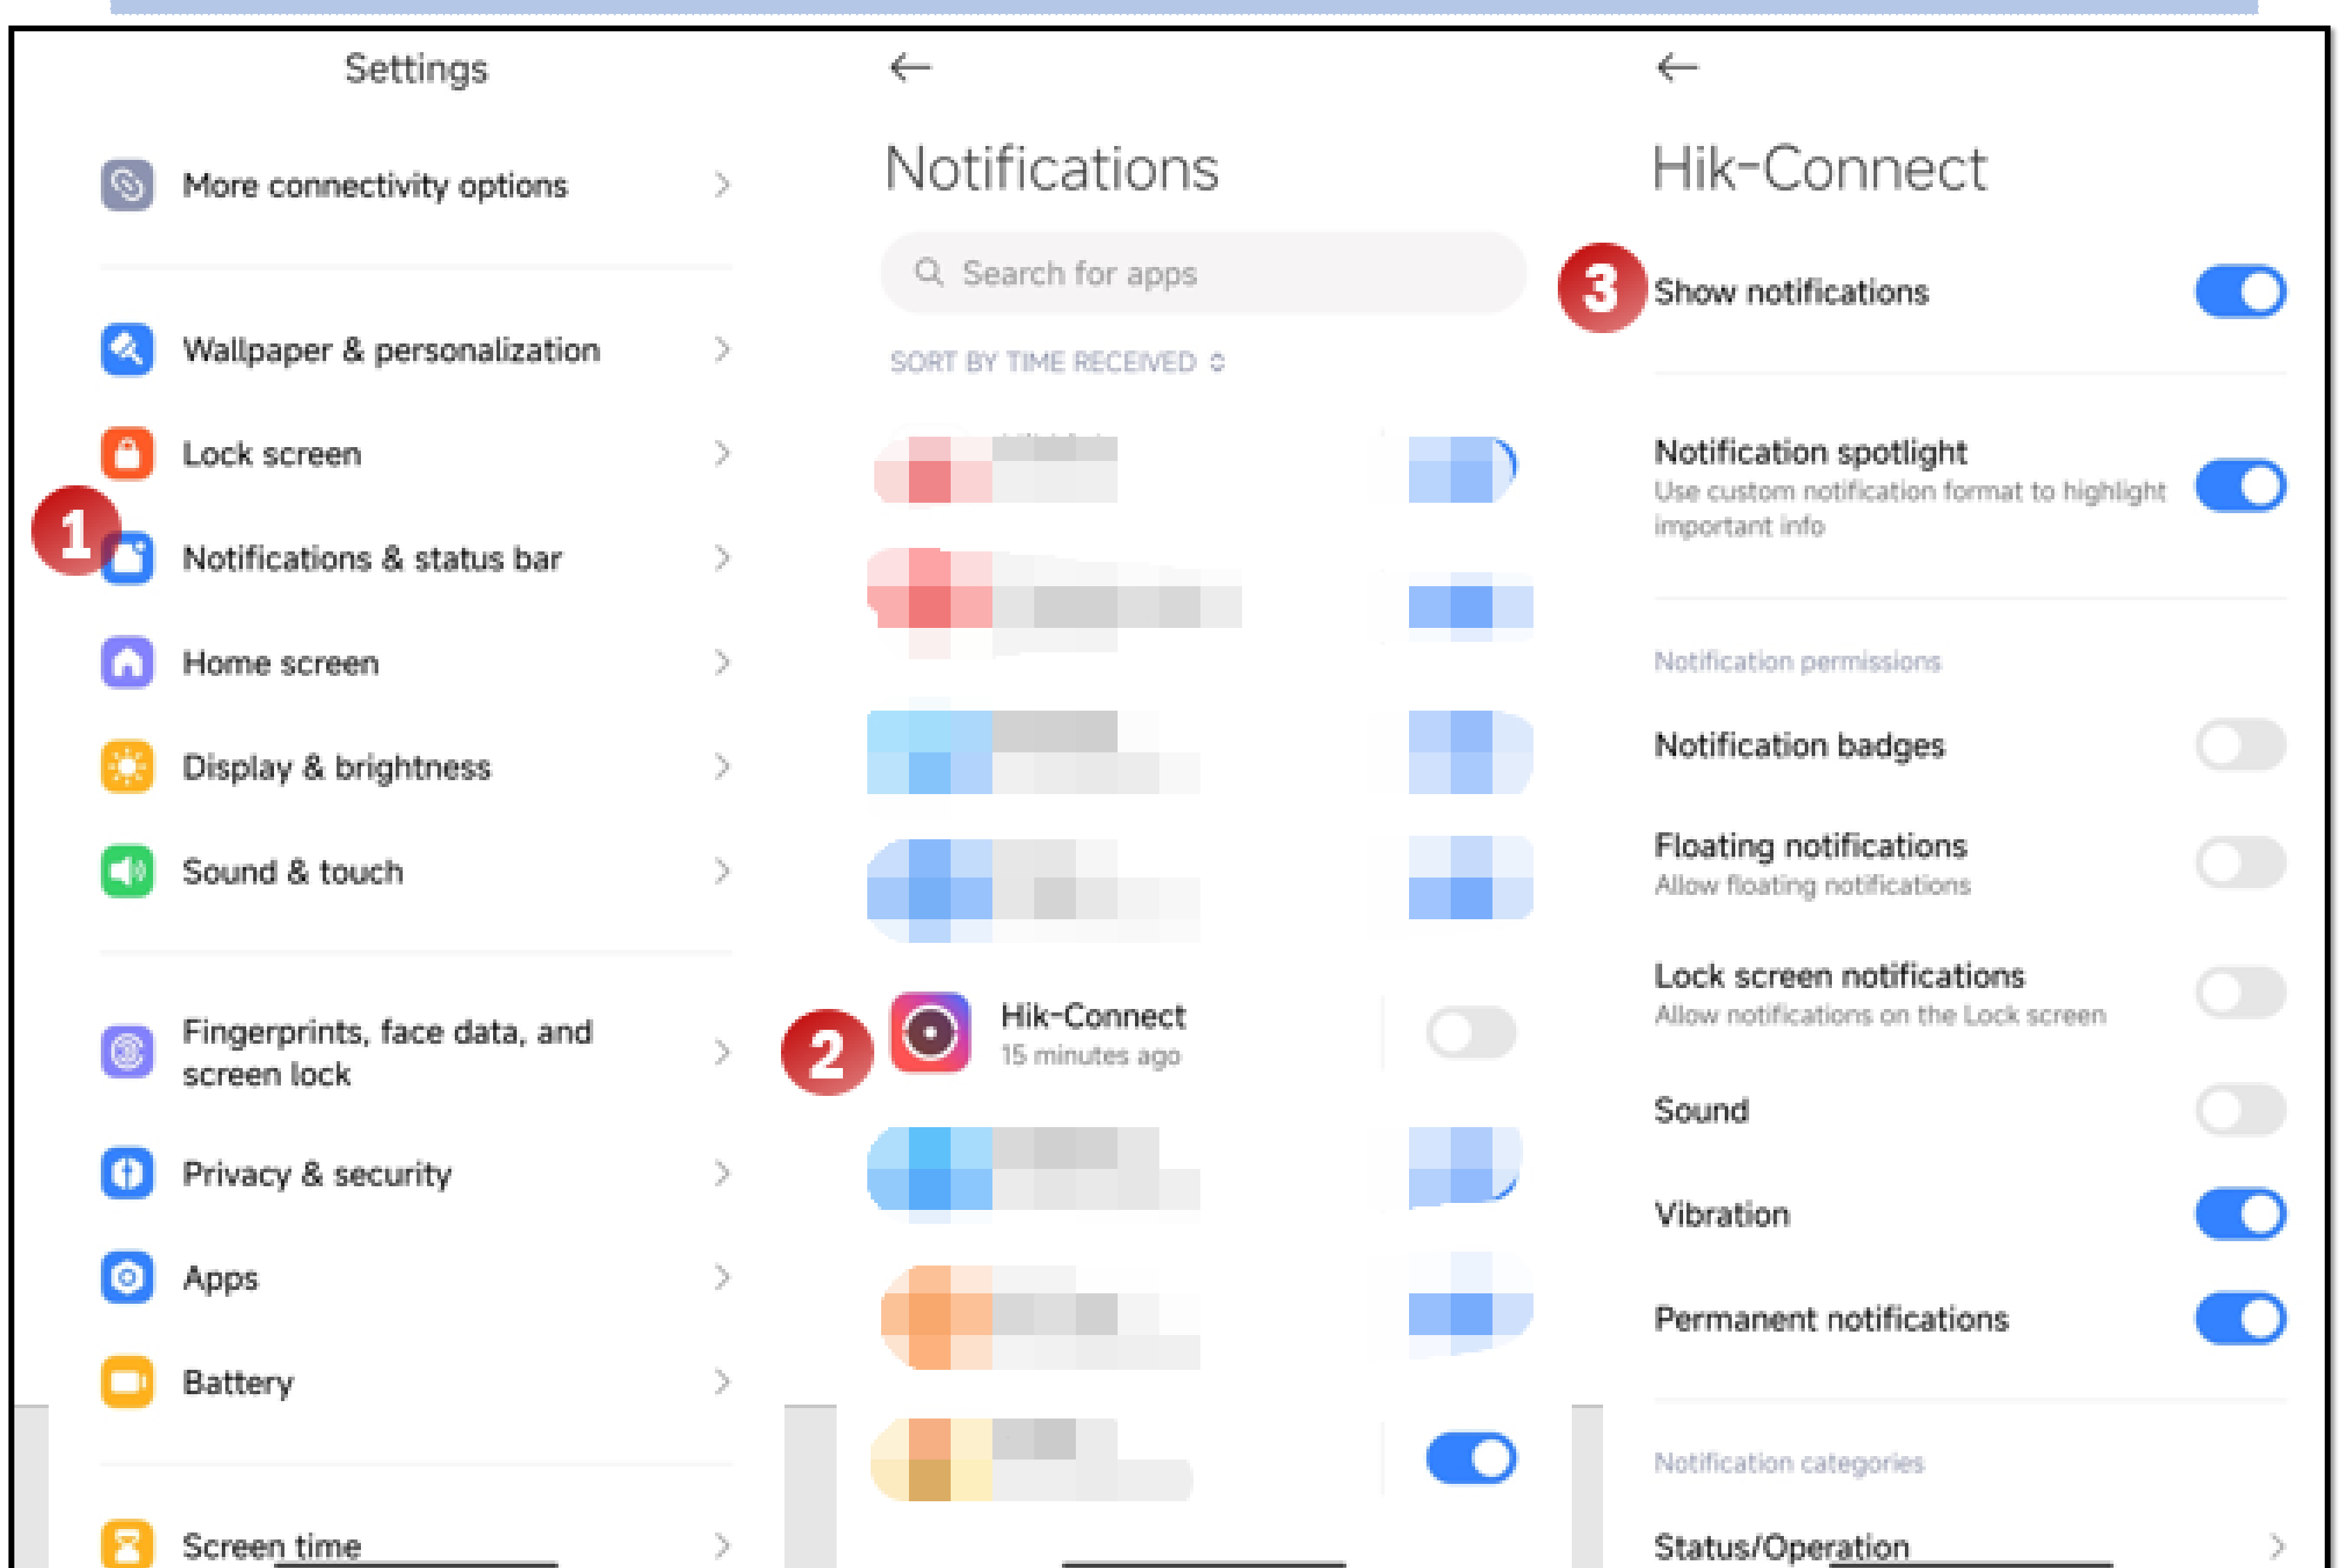

Enable Motion Detection and set Arming schedule and enable **Notify Surveillance Center**.

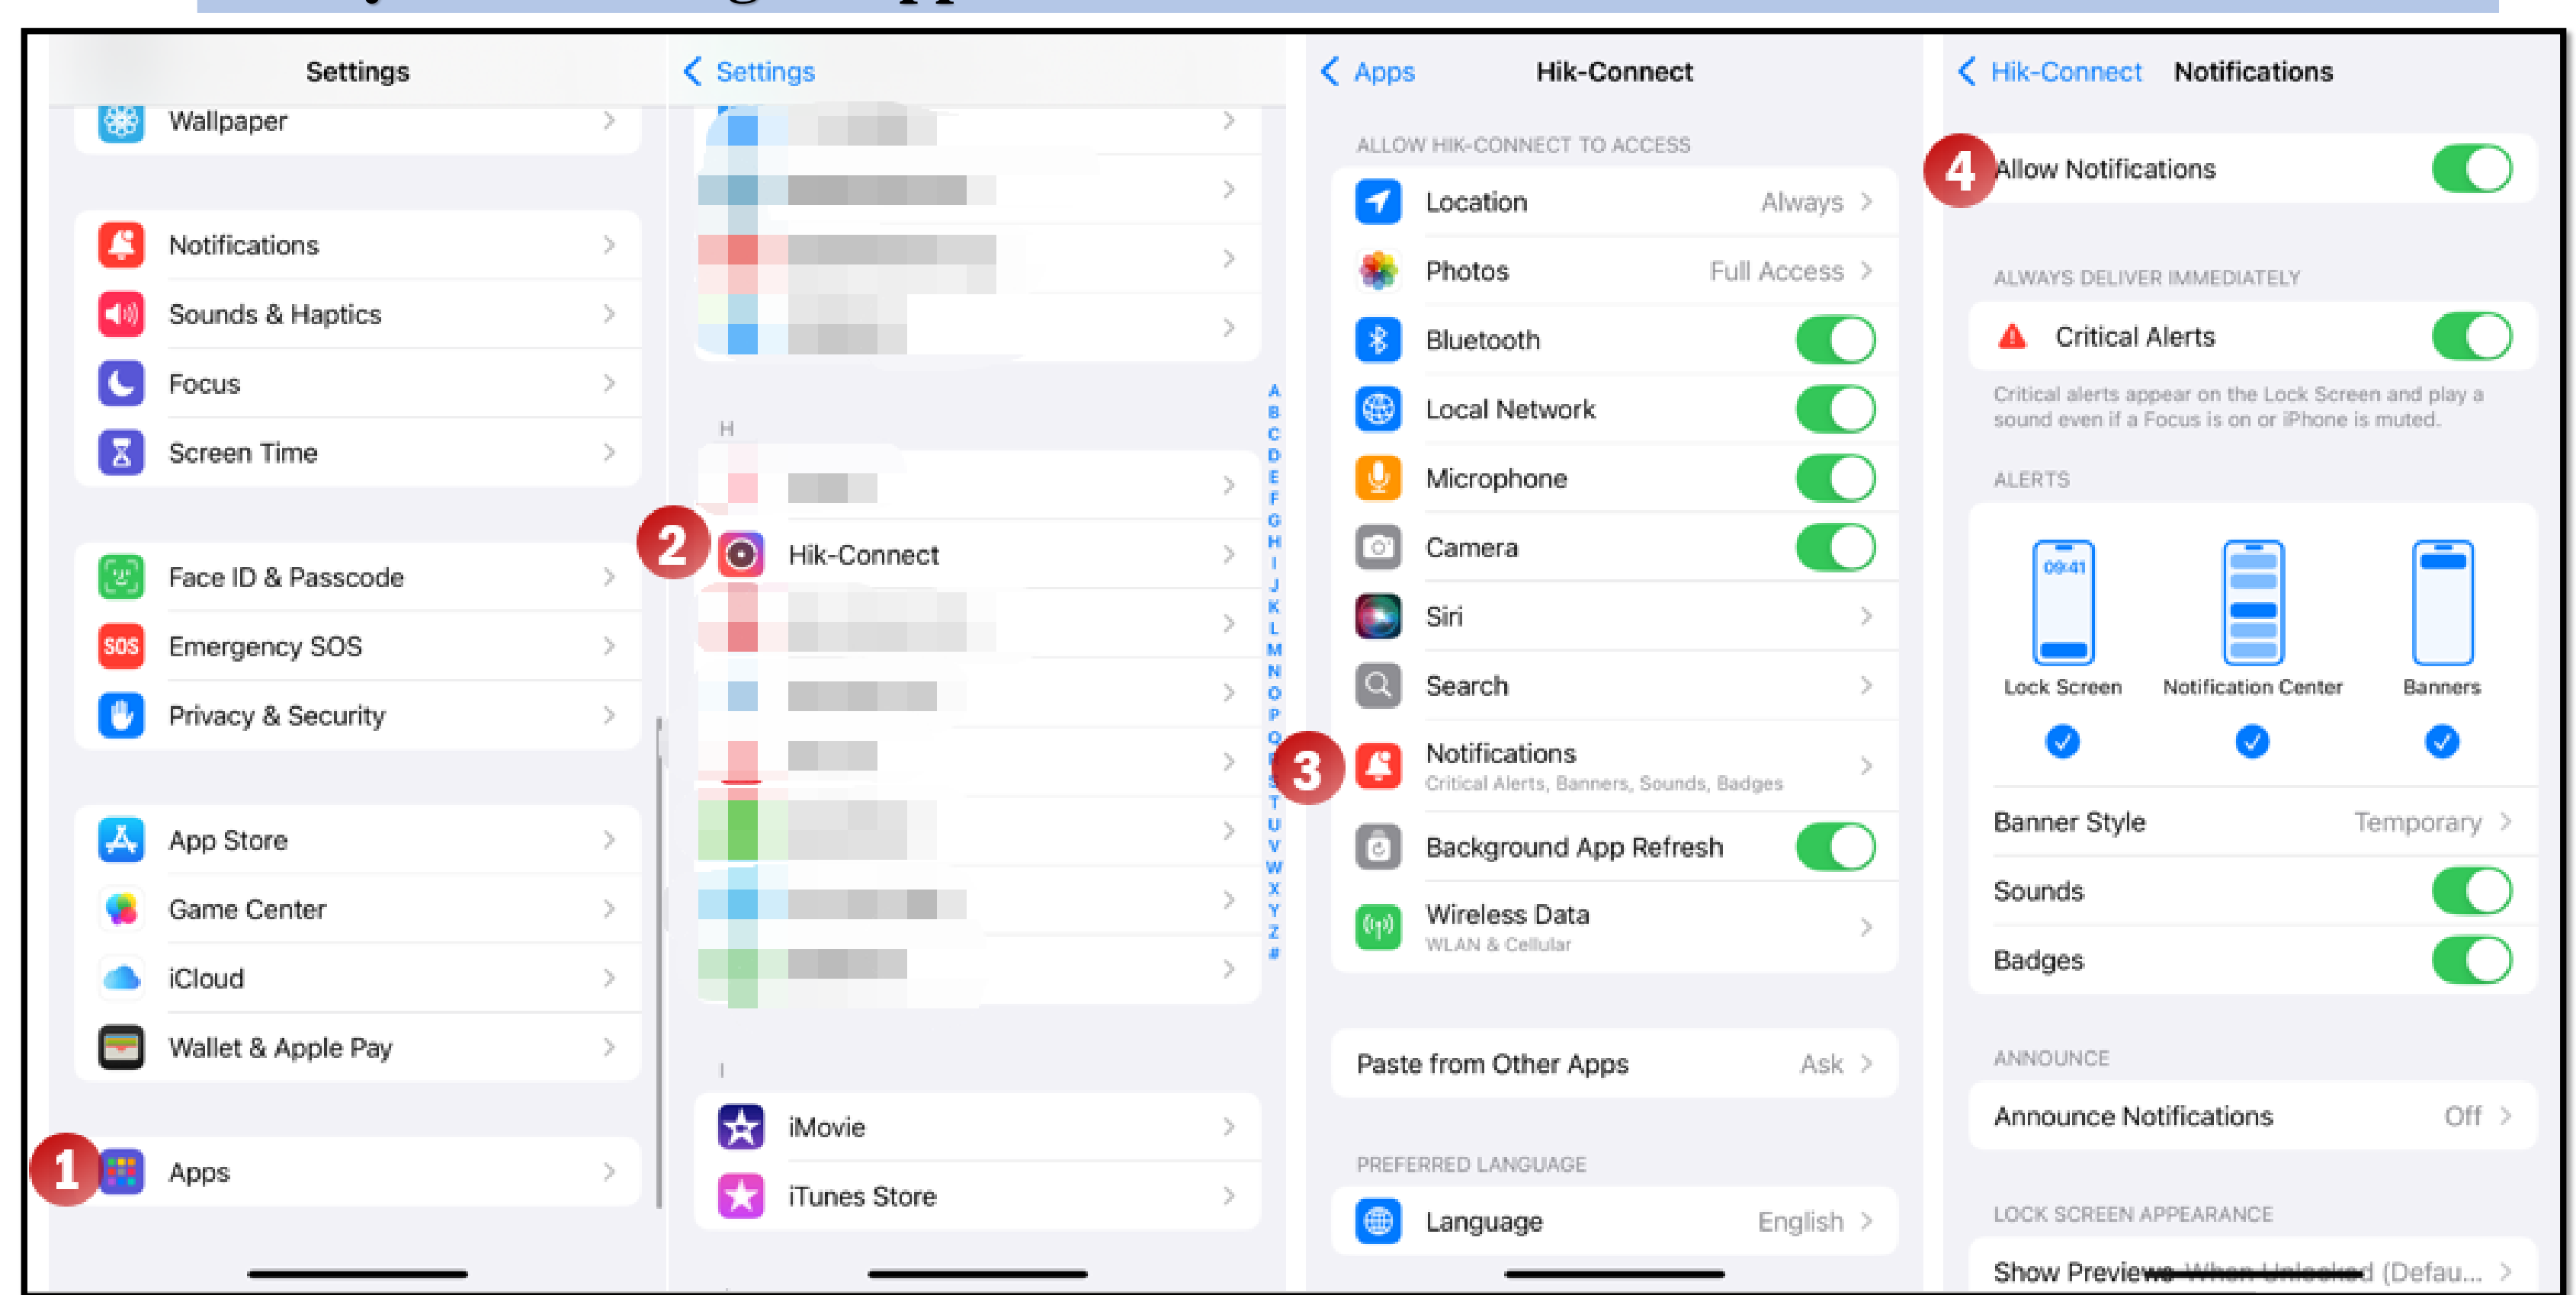

### Setting on Mobile

Turn On notification of Hik-Connect App;

**Android system: Notifications & Status Bar > Hik-Connect > Show Notifications,**  
different mobile phones may have different pages.

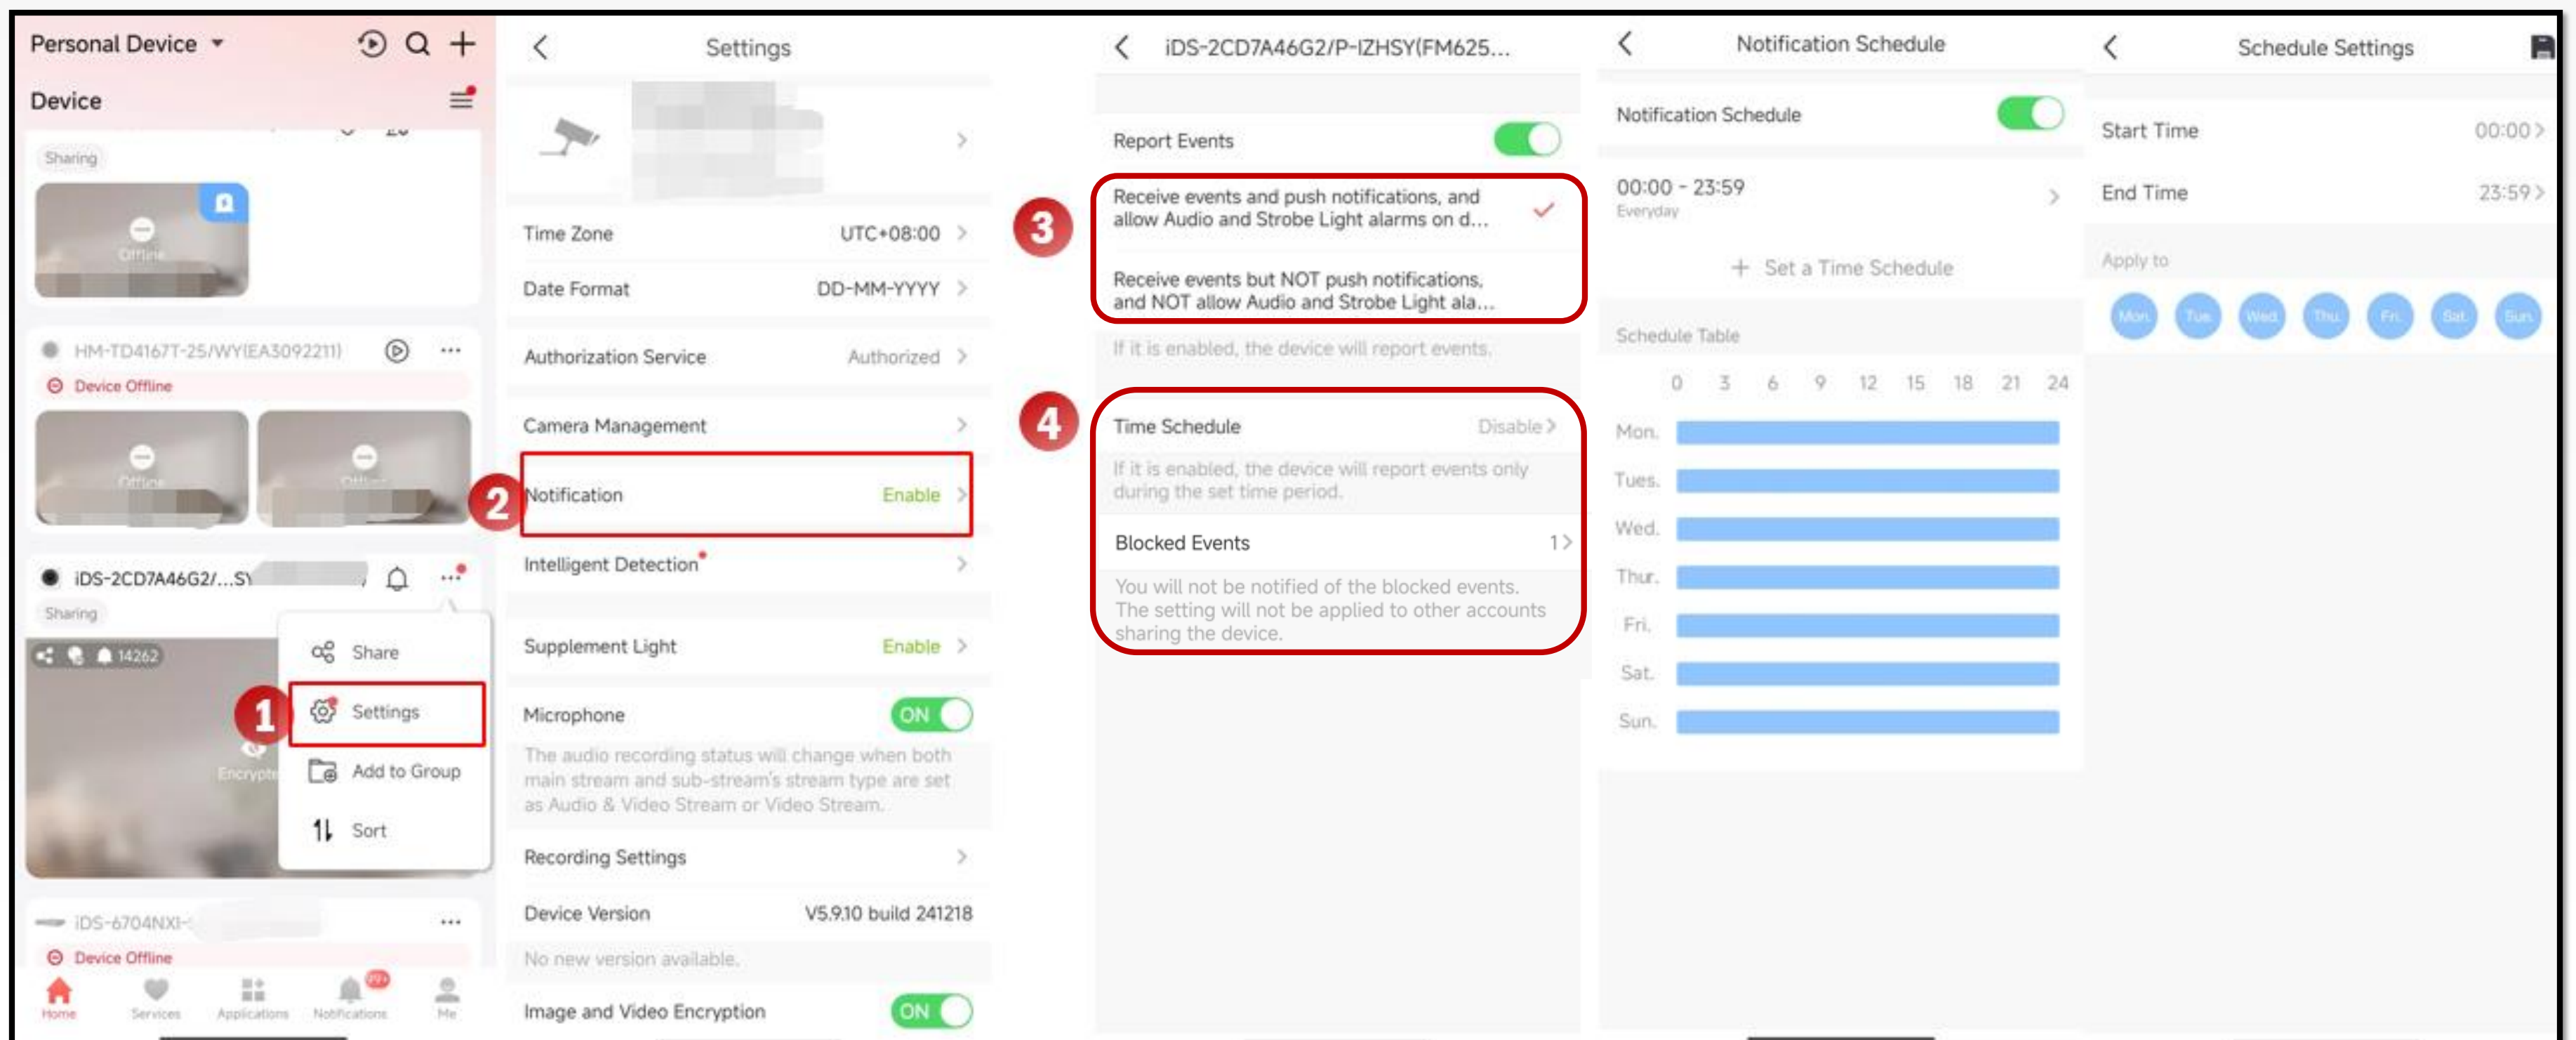

**IOS system: Settings > Apps > Hik-Connect > Allow Notifications**

## Setting on Hik-Connect

Tap Device > Settings > Notification to go to notification settings page and enable Report Event, then you can choose the situation you want.

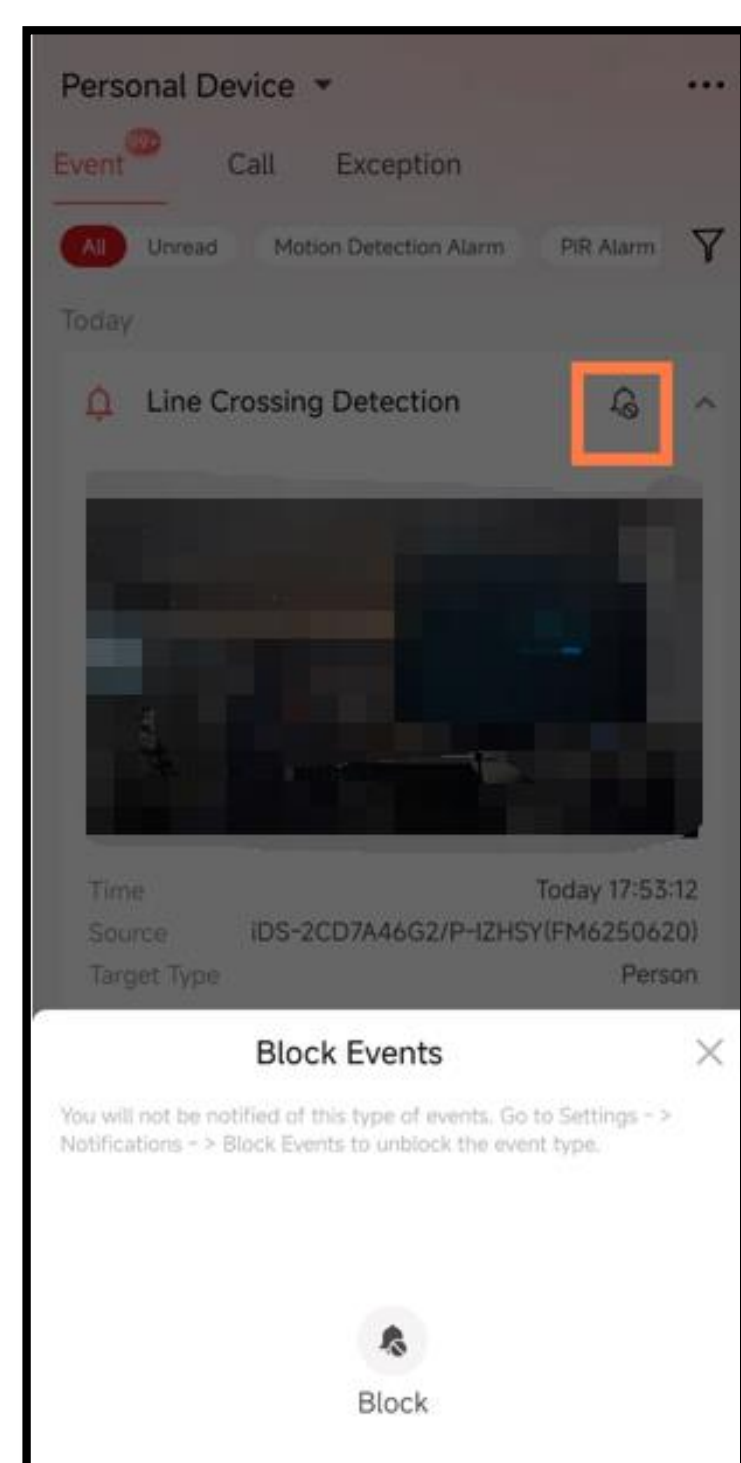

**Time Schedule:** Keep disable status or enable to set time schedule of which duration you want to receive notification.

**Blocked Events:** Check events type you have blocked;

**Notes :** Time Schedule and Block Events options depends on the device capacity, so you may see different options lists.

If you need to block event : Go to Notification> choose notification type> Block.

## Check Notification Setting on Hik-Connect

Tap Me > Settings > Notifications > Device Notification Settings.

Here you can check total notification settings of this Hik-Connect account.
