How to Use Remote Control of LCD Large Screen

This document is intended to introduce the method of how to use remote control to select screen ID of LCD large screen, change Input Source, do TEST, and configure with MENU. Connection of control cables and infrared probe will be introduced first before referring to the detailed operations

1. Connect control cables and infrared probe on the large screen, the rare panel of LCD display unit is shown as below

Control cables are for loop output and splicing display, it transmit control signals between screens, standard cables are network cable with RJ45 interfaces, connect the RS232 OUT1 of x with the RS232 IN of x+1, as the picture below shows

Connect the infrared probe to IR IN of Screen 1(the source of control signals), and put the other side on the front of LCD display unit, making sure the infrared signals from remote control can be detected

2. ID selection

Press IDSEL to call the ID number oflarge screens(the original ID number of LCD unit is 0101, when delivering at porject site, different ID numbers need to be configured, the configuretion can be realized with MENU)

Press the numbers accordingly to select certain screen, e.g. press 0101 to select the screen

with ID 0101, once selected successfully, the ID number of that screen will turn red

You can also press IDALL to select all the screens

3. TEST button

Once screen(s) are selected, press TSET, and the screen(s) will change different color, this function is very useful and frequently used when inspecting a display unit, to find out whether there are faulty screens. Press the TEST button again to quit the TEST mode

4. Change input source

Also under the selected status, press Source to change different input sources, press
, and to select different sources, press OK to confirm

5. MENU

Press Menu to call the menu of screen to see more information of the LCD screen, or do some configurations
